## OVER 40 YEARS DEVOTED TO GROWING HARDY TREES, PLANTS, SHRUBS, EVERGREENS AND ROSES IN THIS LOCATION UNDER THE SAME MANAGEMENT

**Where We Are** We are located in Arkansas — in the northwest corner county (Benton), only twelve miles south of the Missouri line and twenty-six miles east of the Oklahoma line; eighty-one miles almost due north of Fort Smith, Arkansas, and eighty-three miles, almost due south of Joplin, Missouri; one hundred twenty-nine miles east of Tulsa, Oklahoma, and one hundred six miles southwest of Springfield, Missouri. On Federal highways 71 and 62, just south of Rogers, Arkansas.

ON THE TIP TOP OF THE OZARK MOUNTAINS where our growing season is almost thirty days shorter than at Fort Smith, Arkansas. Our summers are short and nights are cool, and our growing season more like that of North Missouri, Iowa and Nebraska, than Eastern and Southern Arkansas.

Hence, our stock is well adapted to the extreme Northern, Eastern and Western States as well as being the best for Southern States.

## THIS FALL IS THE BEST TIME TO PLANT THAT ORCHARD

—WHY DO EXPERIMENT STATIONS, AGRICULTURAL COLLEGES AND FRUIT GROWERS RECOMMEND FALL BUYING? Because you can buy this Fall and have the stock shipped to you and "heel it in" so that you may plant at the most favorable time during Fall, Winter, or next Spring.

Fall Planting is becoming more popular each season as experience shows its advantage. As soon as a tree or shrub becomes dormant it can be removed and the change of location will affect it but little. When set out in the Fall the bruised roots begin at once to heal and callus is formed; recover quickly from moving;

soon become firmly established and with the first touch of Spring are ready to go into business for themselves in a vigorous way.

Again, the ground is usually in better condition for planting in the Fall than in Spring, for much Spring planting is done when the ground is too wet for best results. Perhaps your Spring will be two or three weeks earlier. In this case your trees should be planted earlier than the dates you have ordered them shipped. If they have been planted in the Fall, these Spring delays are done away with.

## ORIENTAL ORCHIDS OF THE GARDEN

(IRIS KAEMPFER)

Your garden is not complete until you have this beautiful flower growing in your perennial collection.

Now you can grow your own Orchids by planting Iris Kaempfer, which is entirely different from all other Iris and comes into bloom as the early summer fades, continuing to bloom until mid-July.

The huge blooms of velvety texture measure 6 to 8 inches across. The leaves are long narrow and gracefully formed, and the plants remain decorative even after the blooming period is over. It is no wonder that the Kaempfer is called the "Orchid of the Garden." Excellent for cutting it will grow 3 to 4 feet high. Plants thrive in well drained fertile soil (it is fatal to select a location where water stands during winter).

Mixture of Colors: Rose, White, French Blue, Purple, Velvet, Lavender, Variegated.

## BIG JUICY STRAWBERRIES

### Important Notice!

A new disease of strawberry plants (Red Stele Root Rot) is very destructive and reports of damage vary from 40 to 92 per cent reduction in fruit crop. No treatment of the disease is known and the fungus will live in the soil for several years making it unprofitable to produce strawberries on the same land where the fungus has been in the soil. This disease is spreading rapidly. DON'T TAKE ANY CHANCE OF GETTING IN THE RED STELE DISEASE. ORDER FROM US. Our plants are twice inspected, once in the spring for Red Stele disease and once in the fall for all kinds of insects and diseases that attack strawberry plants. Our plants are found to be apparently free of all diseases. ORDER OUR PLANTS! HEALTHY STURDY PLANTS. DON'T GAMBLE ON CHEAP PLANTS AND LOSE YOUR FRUIT CROP.

NEW BLUE BERRIES

GROW YOUR OWN BLUEBERRIES—PICK THEM FRESH OFF THE BUSH

Cultivated Blueberries are native shrubs of rare beauty; they are doubly valuable because they are fruitful and ornamental all year.

As a commercial proposition it is one of the most profitable fruits to grow. There is a big market. They make good money in a very short time. You can begin picking the second or third season after planting.

Choose piece of ground easily supplied with moisture during dry summer months. It should not, however, at any time become water-logged. Plant in full sun if possible; they will also do well in partial shade. Be sure the soil is acid. Give only shallow cultivation, not over 2 to 3 inches deep, so as to leave the roots undisturbed.

CONCORD. Bush of upright habit at maturity exceeding 6 feet in height. The berries are large.

JERSEY. Very large and vigorous in habit. The light blue berries are very large.

BENCO'S NEW GOLDEN QUEEN RASPBERRY

A real novelty! A new sensational yellow Raspberry of the black Raspberry type. It is a chance seedling that is a cross between the red Raspberry and the black Raspberry. It is both a novelty shrub and a great fruit producer—the berry being of a rich golden color of medium size. Its flavor is entirely different from any berry grown—a blend between the red and black Raspberry. In many cases it is grown in preference to the red and black Raspberries, because of its sugar-sweet flavor. Just before the berry fully matures it is a rich yellow color, and when fully ripe reaches a rich golden yellow. It is truly a novelty shrub for your garden—the most unusual feature of this new variety is that after the first frost the canes will turn a rich yellow color, which is very outstanding during the winter months. The fruit can be eaten fresh or can also be successfully preserved; again they are very outstanding in a glass fruit jar, for the berries retain their rich golden color. Get some for your garden now!

This new Everbearing grape begins to ripen about the time the Concord does, and continues until frost. Has ripe grapes, green ones and blooms on it all the time after they begin to get ripe until the growing season is ended by frost. The best red wine grape known. A very vigorous grower; for making grape arbors it is without equal. For high, dry countries it appears to be at home as well as on the creek and river bottoms. It does not require a rich soil, but prefers a dry soil of moderate fertility. It is so sweet it is almost too rich to eat out of hand. It has a higher content of sugar than any grape known. The berries are about the size of the Delaware, while the clusters are large; color is black covered with blue bloom.

## BROAD LEAF EVERGREENS

**ABELIA** (*Abelia rupestris grandiflora*)—A beautiful low growing evergreen flowering shrub; leaves a glossy dark green contrasting effectively with the red tinged bark. The numerous small white tinged pink flowers, resemble miniature Arbutus, having comparatively deep, slender throats though the individual flower is only about three-quarters of an inch in length. Blooms from June until frost; delicately sweet scented. Occasionally a "wild," vigorous growth shoot appears which should be pinched off when a dense shrub is desired, 18 to 24 inches, \$3.15; 18 to 24 inches, \$4.20; 3 to 4 ft., \$5.25.

**BOXWOOD** (*Boxus sempervirens*)—Everyone is familiar with Boxwood and its good qualities. There is hardly a plant that can be used in quite so many positions. For edging, as specimens, for urns, window boxes, it is very useful. The foliage is always a shining dark green even through the winter. It is a heavy feeder and should never be planted in soil unless it can get plenty of fertility and moisture. 12 to 18 inches, \$3.15; 18 to 24 inches, \$4.73.

**EVERGREEN EUONYMUS** (*Euonymus Patens*)—One of the best broad leaf evergreens for the Southwest.
